Zonte Metals
 Entry Price - \$0.15

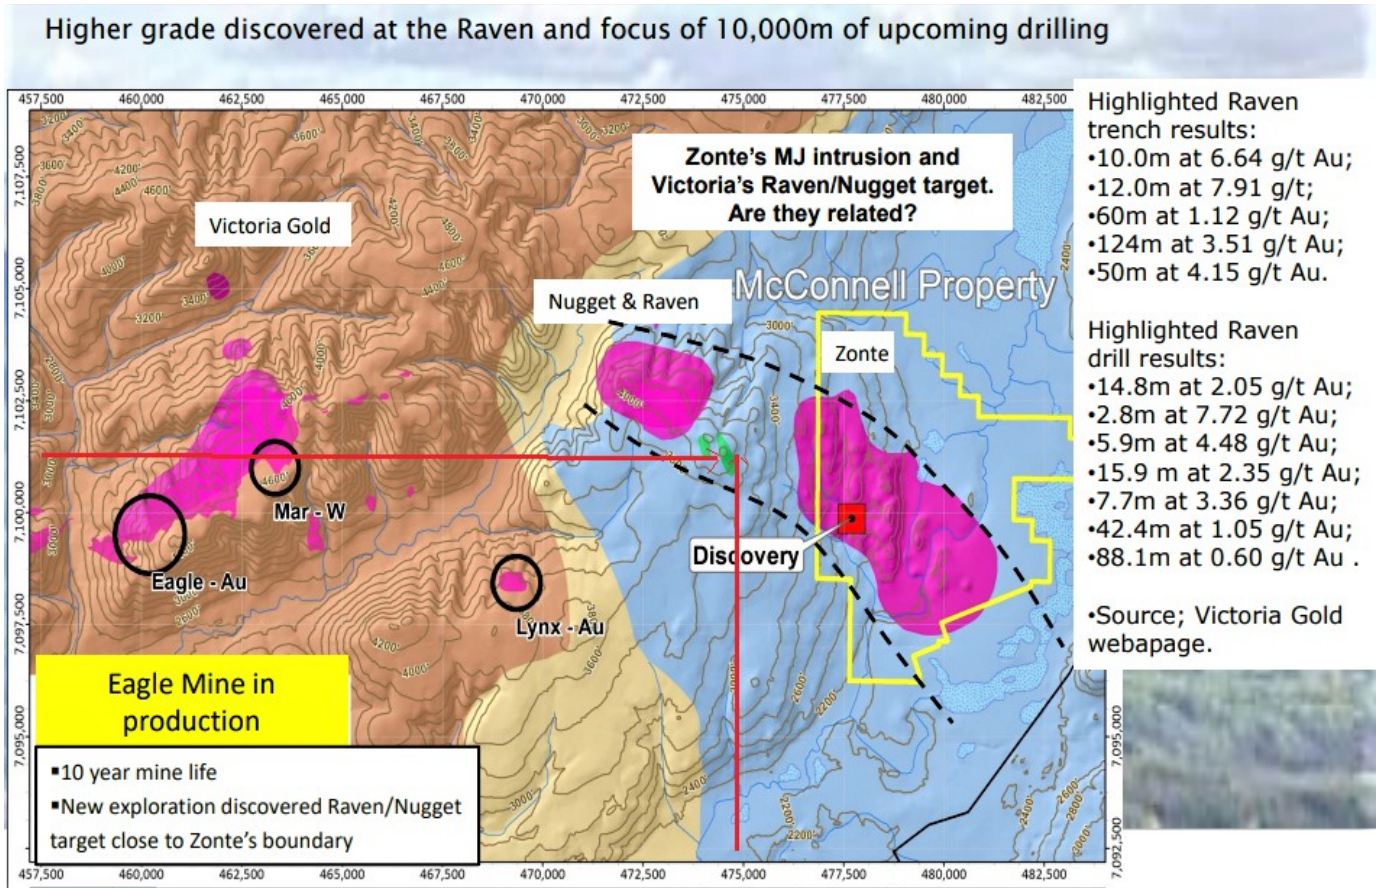

TSXV:ZON

Recent Price - \$0.195
 Opinion – strong buy

The stock is a strong buy anytime we are down to \$0.20 and lower, especially with the news from [Victoria Gold yesterday](#). This is the best news yet as Victoria Gold explores closer to Zonte's McConnells Jest border. Yesterday Victoria Gold announced a step out drill hole, 250 meters closer to Zonte's border and it was the **best hole yet in their Raven area and probably one of the better ones on their whole property**. Drillhole NG20-033C, a 250m step out hole to the east returned **2.77 g/t Au over 65.7 meters**. You can zoom in on this map here if you wish. Hole 033C is to the far right on the map below. https://vgcx.com/site/assets/files/6603/20201012_nugget_nr.png

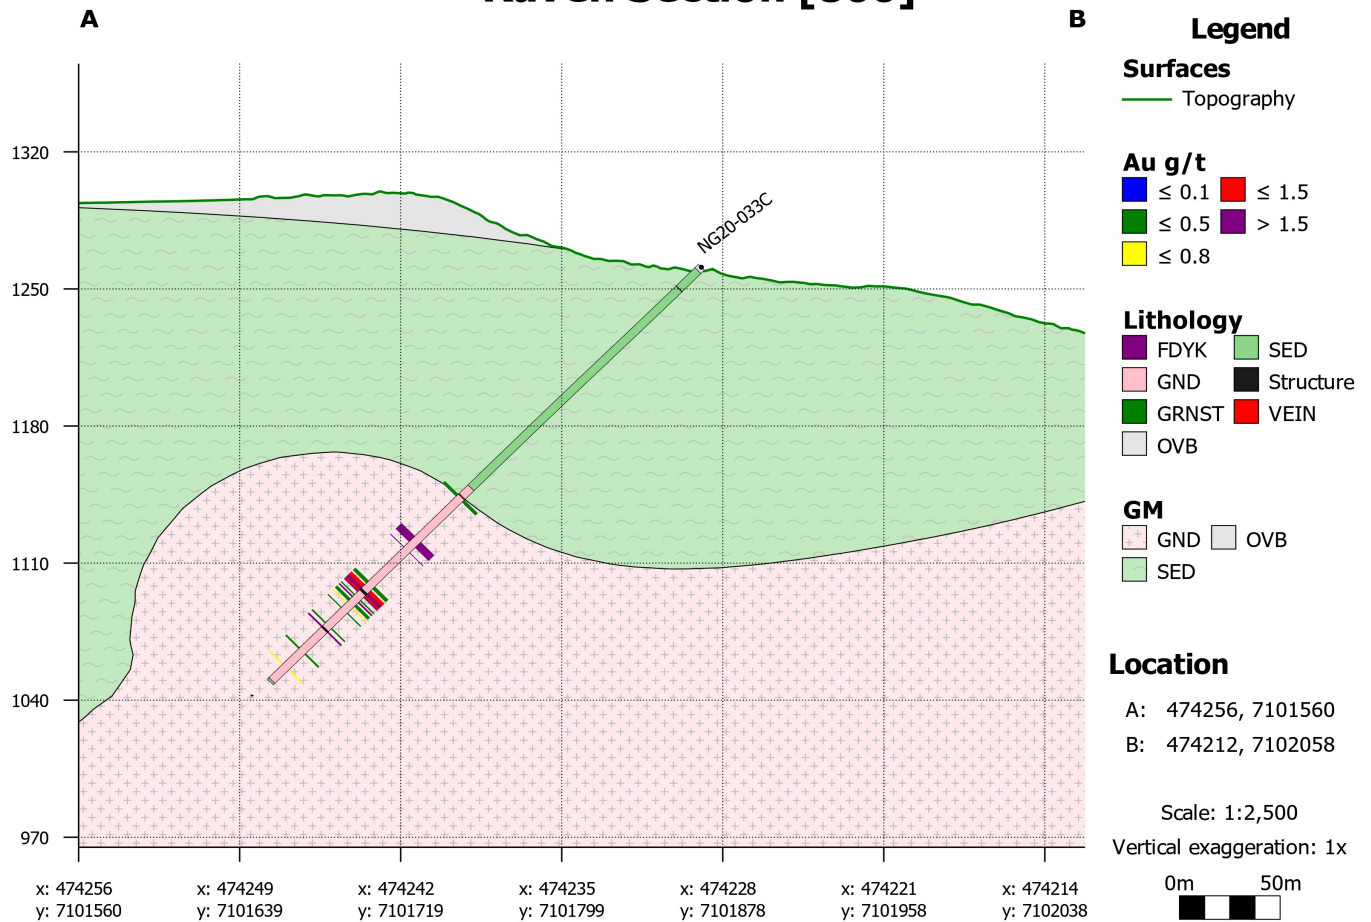

This next map is from [Zonte's presentation](#), which has recently been updated and worth review. We can pin point the drill hole using the maps. Also note that this is outside the Plutons shown in pink. I have no doubt that the two connect. It is not shown as connected as it is either connected underground or has not been accurately mapped. It also maybe be trending where Zonte's drill discovery was. And remember, that one of the two Zonte drill holes in the Two-Four target ended in mineralization. See slide 19 on Zonte presentation.

Further proof is with this map on the next page of Drillhole 033C from [Victoria Gold's press release](#). The intersect is shown once they get into the rock highlighted in pink and they show that rock type continuing to the right (east) towards Zonte's border.

Raven Section [800]

This is really good news and just keeps increasing the value of McConnells Jest. No wonder the interest has been high with the project. I wonder what prompted Victoria Gold to take such a large step out to the east? They know a lot more than what we see in the press release. The press release indicates more assays are waiting from the lab, so we could see more results even closer to Zonte's border. I would bet they have mapped and sampled right to the border and have not published those results. They would not be considered material to put in a press release. They have mostly been releasing trench and drill hole results. This is from their press release and they indicate 3,700 soil samples but no map indicating where.

“Raven is open to the north, south, east, west and at depth. The recently completed 2020 Dublin Gulch Exploration Program culminated in:

- 35 diamond drill holes totalling over 8,040 meters;
- over 3,000 meters of surface trench construction;
- the collection of 3,700 soil samples; and
- the shipment of more than 6,000 core and trench samples.”

If Terry was anxious to get back to the Yukon, he should be more so now. I am certain there has been selling of flow through shares in the market and it could end any time now, a lot has been sold. Volume has been much higher the last couple months. Who has been doing all the buying? Could it be Victoria Gold and principals that know something. Just my speculation, but somebody has been gobbling up all this selling.

Rockridge Resources
Entry Price - \$0.16

TSXV:ROCK
Opinion - buy

Recent Price - \$0.19

The stock has been trading sideways, not much above our entry price and is a good buy here ahead of drill results. Today, ROCK announced that they have completed their 100-per-cent earn in of the Raney gold project, located southwest of Timmins, Ont., ahead of schedule due to the successful findings thus far. Furthermore, the Company is approximately halfway through its planned ~3,000 metre diamond drill program at the Property **with five drill holes completed. The majority of these drill holes have successfully intersected alteration similar to what has been seen in previous high-grade holes drilled on the Property.**

The drill program is planned to evaluate three discrete exploration priorities: 1) test the down plunge continuity of the known, shallow, high-grade Raney Gold Zone; 2) evaluate the east and west magnetic features coincident with and extending along strike from the Raney Gold Zone; and 3) test an underexplored quartz feldspar porphyry (QFP) intrusion proximal to the Raney Gold Zone with associated historical high-grade gold grab sample results.

With only 5,600m of historical drilling carried out at the Property, the Raney Gold Zone has been drilled along a strike length of 225m and with limited drill testing deeper than 150m. The mineralized zone is typified by broad sections of fine quartz veins which comprise up to 15% - 50% of the rock mass.

Six Wave
Entry Price - \$0.68

CSE:SIXW

Recent Price - \$0.39
Opinion – buy

SIXW has moved up some in price, maybe it will finally start getting some traction.

On the 16th, SIXW announced they received an issue notification from the United States Patent and Trademark Office for patent application No. 15/747,858. The patent application was for the company's molecularly imprinted polymer beads for the extraction of metals and uses thereof. The aforementioned patent will issue on Oct. 27, 2020, as U.S. patent No. 10,814,306. With the issue of this patent the company has broadened the company's already registered patent No. 9,504,988, which is also for the use of the company's molecularly imprinted polymer beads for the extractions of metals and uses thereof.

Today they issued an update on their Covid-19 progress. Over the past few months, the Sixth Wave has achieved the following key milestones:

1. Executed a letter of intent (LOI) for the acquisition Aurora Analytics LLC and in accordance with the LOI upon signing the definitive agreement the appointment of Aris Kalivrentos as the Company's Chief Scientific Officer.
2. The formation of an advisory board and the appointment of key advisory members to aid in the Company's COVID-19 response and development initiatives.
3. Executed MOU with Neocon International Inc. for the design and production of the Company's proposed SmartMask™ application.
4. Partnered with York University and the Centre Technologique des Residus Industriels (CTRI) for the development of its AMIPs virus-detection technology through the submission of a grant application to Natural Sciences and Engineering Research Council of Canada (NSERC).
5. Received approval from the Natural Sciences and Engineering Research Council of Canada (NSERC) and commenced the project on August 1, 2020 for development of a prototype of the company's AMIPs technology to detect viruses in airborne, water and waste water environments, specifically SARS-CoV-2.
6. Submitted applications with various US and Canadian government bodies for funding and collaboration partnership opportunities.

Sixth Wave has launched an official website for AMIPs™ (www.AMIPs.com) in an effort to provide a simplified and concise overview of the Company's technology and ongoing development and commercialization efforts. The website includes a media section, with videos and presentations, designed to help visitors better understand the AMIPs™ platform and its advantages over current rapid test and detection products and protocols. I suggest reviewing this new website to get a better understanding of what they could accomplish here.
