This is very sad to break this news but everyone deserves to know. This is from very recent peer reviewed scientific studies that have just been published or are about to. As the title says (there is no good).

This interview is with Dr Byran Bridle professor viral immunology from the University of Guelph. As far as medicine this is probably one of the prestigious Universities in Canada. I know it well, my father worked there over 20 years as electrical maintenance. Any research out of here should be taken very seriously.

The interview is conducted by Alex Pierson that some of you might know from Global News.

Basically vaccines are suppose to stay in the shoulder muscle and was assumed to be the same with these new mRNA vaccines, they then produce antibodies, what has gone wrong with these new vaccines is that the spike protein gets into the blood and there it becomes a toxin.

**I highly highly highly recommend you listen to this interview** to understand the problem. The professor does a very good job explaining it and revealing these new science studies. Dr. Byran Bridle *"We made a big mistake."* **This is why long term studies of vaccines have been done in the past.**

*About - Dr. Bridle is a viral immunologist who is passionate about improving life through two avenues of research. One arm of his research program is dedicated to designing and optimizing novel biotherapies for the treatment of cancers. The goal of his research team is to harness the natural power of a patient's immune system to eliminate their own cancer cells. This represents the ultimate personalized therapy and holds the potential to treat cancers more effectively, safely, and at lower cost than current options. The second arm of his research program focuses on studying host responses to viruses and other inflammatory stimuli. This has implications for the treatment of infectious diseases and inflammation-mediated disorders. These two programs have been unified in a unique way. The Bridle lab is harnessing their expertise in making potent cancer vaccines and combining this with their interest in anti-viral immunity to develop vaccines to protect against infectious diseases such as those caused by highly pathogenic coronaviruses. Mentoring the next generation of Canadian scientists is a responsibility that Dr. Bridle takes very seriously.*

This is another very good video, why [Dr. Perter Mccullough](#) reversed his vaccine recommendation. He also confirms what professor Bridle presented. He has done over 40 publications on Covid-19. He does an excellent job explaining natural immunity. Covid-19 is a once and done virus.  
**PRO-VAX DOC: "I CAN NO LONGER RECOMMEND THE VACCINE TO ANY INDIVIDUAL"**

Over 4,000 deaths and over 12,000 hospitalizations due to vaccines reported on VAERS to date.
