It is very sad and disheartening that the Canadian main stream media has become propaganda outlets for government. **Here is some news Canadians need to know.**

Wake up Canadians, if you are going to hide behind your doors, at least get out and fight for your children. A Canadian pastor (Artur Palowski) is arrested and treated badly for opening his church. Worst yet, we have to get the [news from a US Fox news report](#).

Put in solitary confinement "Whats happened to your country" a quote from the Fox news reporter. After the Fox news story broke, first on May 8th and then with a video a few days later, Canadian main stream news covered the story several days after Fox news, mostly condemning the pastor. Oh, but liquor stores are kept open as essential service. Notice that he was arrested on the street, previous in a viral video the pastor kicked the police out of his church until they had a search warrant. Even a corrupt judge would never issue a warrant against a pastor for running a church service, even if it is outside Covid-19 limits.

Stevens, another pastor arrested *"By God's grace, our church has not had a single transmission of COVID19 in a year of gathering together weekly. We have encouraged those who are sick to stay home and for everyone to be proactive with their health to combat sicknesses we will inevitably encounter,"* Stephens wrote

What do Pastors and Ministers know that the government is afraid of? Simple, it is called the truth.

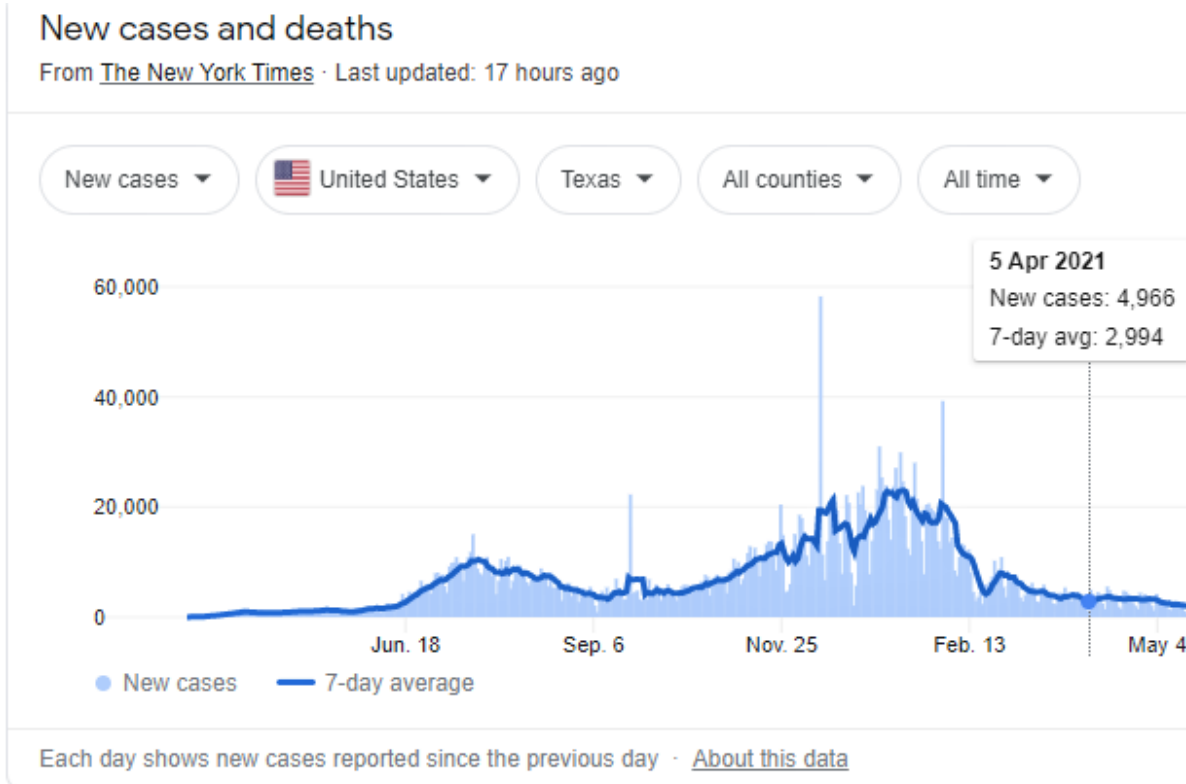

Here what [Dr. Jordan Peterson says about the Trudeau government's censorship bill-C10](#). He has 1 million more subscribers to his youtube channel than Canada's national broadcast station, the CBC. *"CBC, your heavily subsidized but once admired and credible state broadcaster is now ideologically addled, propagandistic, outdated and increasingly despised or ignored. And now you dare to extend your incompetent governance to other media forms?"*

In an interview with [The National Post](#), Former CRTC commissioner Peter Menzies said that Bill C-10 *"doesn't just infringe on free expression, it constitutes a full-blown assault upon it and, through it, the foundations of democracy."*

It was barely or not at all covered in the main stream media, but there were anti lock down protests held in most major Canadian cities this past weekend. The biggest crowd was Toronto at over 5,000. We have to get the news from a [small internet news outlet, True North](#). In essence it is a continued protest as many are ignoring government restrictions and gathering in parks and beaches.

Of course government propaganda and public health labels this as a spreader event and the people are inconsiderate. **That is just nonsense and lies, even the CDC has now admitted the virus rarely spreads outdoors.** This is from NY Times last week For months, research about Covid-19 has pointed to two encouraging patterns. First, the underlying virus that causes Covid [rarely spreads outdoors](#). Second — and even more important — fully vaccinated people are at [virtually no risk of serious disease](#) and only a minuscule risk of spreading the virus to others. Yesterday, the agency [effectively acknowledged](#) it had fallen behind the scientific evidence:

Remember the [Texas Rangers home opener game with the Toronto Blue Jays on April 5th](#), it was played in a packed stadium of fans. So called experts and left wing scare mongers said it would be a super spreader, even Biden himself. Here are the facts and from a left wing newspaper. On game day the average 7 day daily case rate **was 2,994 in Texas, you can see the continued drop and at May 17th is 2,020, down -33%**. Super spreader, what a crock of sh__.

Just out Tuesday -Two Months After Biden Blasted "Neanderthal Thinking", [Texas Reports Zero COVID Deaths](#)

Do not pay any fine you get from breaking these Covid-19 restrictions, go to court, they will all be thrown out because **everything going on here is against the Canadian Charter of rights. Covid-19 in Canada is just a big exaggeration and lie.**

Some simple facts. Although there were 572,982 'cases' in Canada during 2020, the majority were not actually ill or experiencing any symptoms. Rather, these 'cases' refer to people who tested positive on a **PCR test, the accuracy of which has been seriously questioned by medical doctors and infectious disease specialists.** Of those Canadians who did show symptoms, most experienced it as a mild or severe flu, and very few required hospitalization.

By March 19, 2021, the total number of positive PCR test results ('cases') had grown to 916,844. Statistics Canada offered detailed information on 71 per cent of these. Only slightly more than seven per cent required hospitalization, and approximately 1.4% of the 916,844 were admitted to ICU. As one would expect, nearly two thirds of ICU admissions were above the age of 60. That means just 12,835 people admitted to ICU in the past year. **But you cannot deny that our hospitals were over run. The real issue is that they were over run every few seasons before Covid-19, just ask any doctor or nurse that works at one in a big city.**

[You can view the charter here.](#) Here are some relevant highlights

- **Section 6 of the Charter of Rights and Freedoms:** *Every citizen of Canada has the right to enter, remain in, and leave Canada.*
- **Section 2a of the Charter of Rights and Freedoms:** *Canadians have freedom of conscience and religion.*
- **Section 15 of the Charter of Rights and Freedoms:** *Canadians are not allowed to be discriminated against based on, for example, mental or physical ability (health).*
- **Section 14.1 of the Quarantine Act:** *Any qualified person authorized by the Minister may, to determine whether a traveler has a communicable disease or symptoms of one, use any screening technology authorized by the Minister THAT DOES NOT INVOLVE THE ENTRY into the traveler's body of any instrument or other foreign body.*

That would mean a swab for a PCR test.

All this Covid-19 BS is eventually going to be exposed. There are countless lawsuits involving 10,000s of doctors, lawyers and scientists. Here are a couple links that will give you an idea about this. The biggest part of this scam or the underlying cause are the inaccurate PCR tests. **False tests with no scientific proof that they are accurate are creating a false pandemic, all on their own.**

[On May 13th, A large team of more than 1,000 lawyers and over 10,000 medical experts, led by Dr. Reiner Fuellmich,](#) has initiated legal proceedings against the CDC, WHO and the Davos Group for crimes against humanity. This article also gets into the Nuremberg Code (universal right of informed consent to medical interventions)

The PCR test was never designed to detect pathogens and is 100% inaccurate at 35 cycles. All PCR tests monitored by the CDC are set at 37 to 45 cycles. The CDC acknowledges that tests over 28 cycles are not allowed for a positive reliable result.

This invalidates over 90% of the alleged Covid cases / "infections" detected by the use of this incorrect test.

It is not easy to find an English interview of Dr Reiner Fuellmich, but [this gives a good background about him and how/why he got involved.](#) This is more recent, and gives a [good update on where things are at,](#) the first lawsuit filed in Canada and a big problem is the Drosten PCR test where they all make piles of money. With Drosten PCR tests so far, 2 courts ruled as ineffective to test for the virus. Just a matter of how many court rulings will it take? The old media is pretty much dead. This video with Fuellmich is must see, he successfully sued Volkswagen and Duetsche Bank for \$billions.

About a 100 doctors and scientists send an open letter to the European Medical Agency requesting answers to 7 concerns about the experimental vaccines. Of course [their letter went unanswered so it was made public here](#)

I checked some recent numbers at [worldometers,](#) that everyone follows. These are total cases per million

| Country | Cases/million |
|---------|---------------|
|---------|---------------|

| | |
|-----|---------|
| USA | 101,436 |
|-----|---------|

| | |
|----|--------|
| UK | 65,291 |
|----|--------|

| | |
|--------|--------|
| Canada | 35,079 |
|--------|--------|

| | |
|-------|--|
| India | 18,207 (I highlighted India that is in the news. Per million is low, they have a large population) |
|-------|--|

Now some countries with low case numbers

Country cases/million

| | |
|-----------|-------|
| S Korea, | 2,589 |
| Australia | 1,164 |
| Taiwan | 95 |
| China | 63 |

Seems strange that China is so low and that is where it all started. I would not believe anything out of China so will disregard that number. Taiwan and S Korea are neighbouring countries to China and have managed Covid-19 exceptionally well. Taiwan has just 14 deaths and S Korea just 1,904. These are fractions of the **reported** deaths in Canada. S Korea has a larger population than Canada around 51 million and Taiwan lower at 23 million. Both countries acted far quicker than most, starting in January 2020. S Korea developed it's own Covid-19 test and neither country is using the PCR test. **So they are not reporting all the false positive test results that are no help and actually a deterrent to managing Covid-19.**

It seems some countries, like UK, US and Canada have a strategy of reporting as many positive test results as possible. This is one of many reasons why these countries have so many problems with Covid-19. Australia also has a low case number and from what I can find they are using the PCR test, but they are managing their testing completely different. Australia is only doing targeted testing and no large scale testing. This is [their reasoning from their department of health](#).

Currently, the CDNA, PHLN and the Australian Health Protection Principal Committee (AHPPC) do not support large-scale, non-targeted testing for SARS-CoV-2 in asymptomatic people as part of the public health response. Non-targeted asymptomatic testing is neither epidemiologically sound nor a cost-effective approach to identify disease transmission. 11, 12 Mathematical modelling shows that testing of non-targeted asymptomatic individuals is not an efficient way to detect community transmission 13. This testing framework outlines where asymptomatic testing is best targeted to inform the public health response (Section 5).

An associate sent me this joke. It is pretty good -

Donald trump wanted to paint the white house..

He called for quotations..

Chinese guy quotes 3 million.

Lebanese guy quotes 7 million..

Polish guy quotes 10 million..

Trump asks the chinese guy.."how did u quote 3 million..?"

Chinese guy replies.. "1 million for paint, 1 million for labour, 1 million profit.."

Trump asks the Lebanese guy..

He replies-".. 3 million for paint, 2 million for labour, 2 million profit.."

Trump asks the Polish guy..

He replies...

"..4 million for you.. 3 million for me.. and we will give 3 million to the chinese guy and ask him to paint..!!"

The Polish got the contract!

This could be a good joke, but it is actually true, this is how our governments operate.

I came across [these poll results](#). The media and doubters can say what they want and cry conspiracy theory, but this is what Americans really believe.

A majority (51%) of voters believe it is likely that cheating affected the outcome of the 2020 presidential election, including 35% who say it's Very Likely cheating affected the election. Seventy-four percent (74%) of Republicans believe it is likely last year's presidential election was affected by cheating, a view shared by 30% of Democrats and 51% of voters not affiliated with either major party.

The survey of 1,000 U.S. Likely Voters was conducted on April 11-12, 2021 by Rasmussen Reports. The margin of sampling error is +/- 3 percentage points with a 95% level of confidence. Field work for all Rasmussen Reports surveys is conducted by Pulse Opinion Research, LLC. See [methodology](#).

It is not just Canadians that are loosing their rights.

More than 120 retired U.S. generals and admirals signed an open letter warning that the United States is embroiled in an existential fight and urged "all citizens" to get involved in local and state politics.

"We are in a fight for our survival as a Constitutional Republic like no other time since our founding in 1776. The conflict is between supporters of Socialism and Marxism vs. supporters of Constitutional freedom and liberty," states the letter ([pdf](#)), which was signed by 124 former military leaders, released by "Flag Officers 4 America."

The letter also posited that opposition to proposed bills and laws that would strengthen election initiatives has troublesome implications.

I saw this news yesterday. **Apple has "largely ceded control" of its data centers in Guiyang and the Inner "Mongolia region" to the Chinese government** despite CEO Tim Cook previously assuring that data stored within the region would be safe.

Key quote: "*Chinese state employees physically manage the computers. Apple abandoned the encryption technology it used elsewhere after China would not allow it. And the digital keys that unlock information on those computers are stored in the data centers they're meant to secure.*"

It reminds me of the early days before Research in Motion's (Blackberry) decline. China would not allow Research in Motion into China because their Blackberry messenger was too secure. In other words, the Chinese could not monitor it.

More rights violations. Defence lawyers are appalled because they cannot get the video evidence that prosecutors are using to arrest and jail so called criminal activity at the January 6th Capital Hill protest. What footage we saw was from cameras at the event posted on youtube. Some commentary on the issue at zerohedge.

So what, exactly, is the government trying to hide? How can activity inside and outside a public building be considered "highly sensitive?" In response to a Freedom of Information Act filing by Judicial Watch, Capitol Police [told](#) the group the recordings are not "public records." But of course they are. A security system controlled by a federal agency in a public building paid for by taxpayers to conduct the public business of public officials is most certainly a public record.

Even if legal loopholes allow for such an exemption, the greater public interest should supersede any technicalities. Major parts of the original narrative already have fallen apart, including the story that officer Sicknick was murdered by Trump supporters and the myth it was an "armed insurrection"; the full account of what prompted the killing of Ashli Babbitt by an unidentified Capitol cop is still unknown.

Further, the Biden regime is weaponizing January 6 to hunt down and destroy the lives of people—many of whom committed no violent crimes—anywhere near the building that day. The Justice Department is promising to build sedition cases; Biden’s intelligence chiefs are operating outside their authorization in their effort to portray regular Americans as domestic terrorists.

There’s only one reason why the Justice Department wants to keep the footage under seal: it contradicts most if not all of the claims advanced by Democrats and the media over the past four months.

Republicans, to the extent they can or will, and the media should demand the release of all the footage. Ditto for families of the defendants. The American public still doesn’t know exactly what happened on January 6—and it’s clear the government will use any means necessary to keep it that way.

Update on crypto currency. There is a better way to describe the mining of crypto coins. They *are actually mining your wallet and bank account.*

Crypto currencies have been plunging and markets, lumber and copper correcting. Is the bubble popping? At this point it only looks like a correction, but it might be the beginning of a topping process. The market peak came right on cue as most government stimulus money ended up in market speculation.

From my [April 6th update \(Present Danger\)](#)

“I expected markets could make new highs as Covid relief checks started to arrive in accounts and that appears to be playing out. I expect a peak to this move could come in April to mid May. ‘Sell in May and go away’ could be the right mantra for 2021. As investors I believe we should increase cash levels during this run up and maintain good positions in gold. Gold summer rally is in the cards.”

We sold Dynacert in 2020 for an average price of \$0.85 for a 183% gain. It is time to jump back in

DynaCERT TSX:DYA Recent Price - \$0.42
52 week range \$0.36 to \$0.94

For background see my [April 2018 report](#) and my [September 2019 update](#)

DYA was hit hard by Covid-19, the plant was shut down and for a year at least, their potential customers were not sure which way they were going. They did not progress much with their sales as a result. However, the next big push and narrative is climate change and green energy. DYA will benefit from this. **Remember this big push and narrative is not about solving pollution problems, it is about the next cash grab by the elite.**

If the government, for example the Trudeau government was honest and serious about eliminating pollution and green house gases, all they would have to do is support and push DynaCERT's technology. This would do multiples of better good and better results than anything they have done or planned. They could meet their 2050 targets in a few years. Sadly all this narrative is about money, carbon taxes and big grants and subsidies to their friends starting green companies and climate initiatives. DYA will still do very well even if they only get some of the benefits on the fringe.

The main reason for my timing to buy back is the stock chart and the above will drive the longer term appreciation.

First an update. This is from their March 15th press release, joining the Hydrogen strategy working group

The Ontario government established a new hydrogen strategy working group to help inform the development of the hydrogen strategy for the Province of Ontario.

This working group is intended to build on the input that the Ontario government received through the public consultation process and Ontario's hydrogen discussion paper. Members of the hydrogen strategy working group will also provide advice on how to use hydrogen across various sectors and help Ontario compete in the global hydrogen market. The Ontario government has invited 21 Ontario hydrogen economy participants to the hydrogen strategy working group, which consists of experts from industry and academia.

Sales in the global mining industry

In Q1 2021, DynaCERT has shipped or received confirmed orders of its flagship HG-1 HydraGEN technology units as well as its sister HydraGEN HG2 and HG-4C and HydraGEN HG-6C large capacity units to international mining companies operating in Russia, China, Brazil and Peru through sales to its arm's-length dealer, H2Tek, specializing in the sale of HydraGEN technology in the mining industry. H2Tek is sponsored internationally by Export Development Corp., a Crown corporation of Canada, and DynaCERT's currently sole Asian dealer, Puma HydroCarbons, which operates in China. Diamond mines, coal mines, copper mines and gold mines are adopting DynaCERT's proprietary HydraGEN technology globally. The HydraGEN HG-4C and HydraGEN HG-6C large capacity units will soon be deployed in open-pit mining operations on large 50-litre diesel engines that operate in hostile climates, such as open-pit mines where temperatures lower than minus 40 C occur and are located in very remote areas of the planet.

Growing sales in the trucking industry in North America

Q1 2021, DynaCERT has received purchase orders with an advanced payment of 20 of the company's 20 newest 2021 model HG-1 units for the North American continental trucking customers of KarbonKleen, which is furthering its successful trials to its trucking and logistics clients.

In Q1 2021, DynaCERT has sold and installed the company's HG-2 units to a midsize Dodge truck and Ford F-350 delivery truck in Ontario through the company's dealer, H2Tek.

City of Woodstock success

DynaCERT has just completed emission tests on the City of Woodstock's entire bus and garbage truck fleet to showcase reductions of greenhouse gases and fuel savings with very solid results from its initial previously announced pilot project. The City of Woodstock reduced fuel consumption by a significant factor in its recent garbage truck trials featuring DynaCERT's HydraGEN carbon emission reduction technology.

DynaCERT is also working with several municipalities across Ontario, supplying quotes and extensive analyst reports for their fleets showing the potential fuel savings and, more importantly, the emission reductions and greenhouse gas reductions that can be realized with the utilization of HydraGEN carbon emission reduction technology.

DynaCERT and its dealer in negotiations with the world's largest transportation polluters

DynaCERT and its Canadian dealer, Mobile Emissions Testing Inc., are in negotiations with one of the world's largest transporters of goods which is committed to reducing its carbon footprint. As well, Mobile Emissions is assisting the company with its Ontario government initiatives and is also focusing on some of Ontario's largest municipal accounts.

You can see that sales look to be picking up again. I need to show you a long term and short term chart. The stock has just bounced off long term support around \$0.35, it has done this several times in last 2 years.

It bounced off this support with a morning doji star reversal pattern. This is a strong and very reliable reversal pattern. It is telling us downside is practically zero and the stock has mostly upside from here.

First resistance is around \$0.55
