- If you are in a war, one of your key advantages is to know your enemy. To know what will happen on the plandemic front, you need to know the central planners. After almost 2 years, we know how they create fear, spread propaganda and twist data or report partial data to fit their narrative. I could go on, but suffice to say, I know exactly what is going to happen in the months ahead. It is like reading the script of a play before you go see it. I will bet anyone \$100 that I am right how Covid will unfold between now late spring or summer.

Over the weekend I took in some main stream media as well as my usual research into the real facts. It is very obvious they are planting fear on this new Omicron variant. You could not avoid news and hype on this new variant. They were even planting seeds that it is unknown if the experimental shots will work on Omicron. Travel restrictions from African countries were put in place. This is to promote fear, it will do nothing to stop the new variant because they want it to spread. It is part of the plan. We have already seen numerous announcements of this variant around the world, including Canada.

First off you should know the accurate information on Omicron, [a news report/interview in The Telegraph](#) of Dr. Angelique Coetzee that discovered the variant. *"Their symptoms were so different and so mild from those I had treated before,"* said Dr Coetzee, a GP for 33 years who chairs the South African Medical Association alongside running her practice. She had about 2 dozen cases before she reported a suspected variant, mostly men, about half unvaccinated and they complained of feeling so tired and sore for 1 or 2 days but not the traditional loss of taste and smell and other usual symptoms. **Now it is important to understand that 30 or 40 cases is not enough data to make conclusions, but at least so far Omicron looks very mild.**

The big Pharma criminals put out news releases that they have started work on new vaccines for Omicron. [For example, from Moderna](#) *"Since early 2021, Moderna has advanced a comprehensive strategy to anticipate new variants of concern. This strategy includes three levels of response should the currently authorized 50 µg booster dose of mRNA-1273 prove insufficient to boost waning immunity against the Omicron variant."*

- They have been studying a stronger (double) dose of their booster;
- They have already been studying two multi-valent booster candidates designed for mutations;
- And 3<sup>rd</sup>, they will rapidly advance an Omicron-specific booster candidate.

My concern since they started this world wide double dose experiment, was, would it work? There is now ample evidence that these shots are totally ineffective to stop the spread and infection. The narrative is falling apart that they help with hospitalization and death. I showed data from England, New Brunswick and Ontario that hospitalization is rising with vaccinated and death rates have doubled. If a vaccine works, the death rate will go down, if it doesn't, death rates will stay the same. That said these shots are actually causing more harm than good because death rates are rising. Now, more evidence from the US. [The Wall Street Journal reports](#) that 2021 Covid related deaths as of November 27<sup>th</sup> are 770,800, more than double the 385,343 in 2020 and the year is not over yet. What has happened in the US in 2021 from 2020? About 60% of Americans are double dosed. Just using a round 50% number, deaths should have dropped in half, not more than double. Furthermore, the [Covid-19 wave in 2020 was much larger than the recent 2021 one](#). If this does not open peoples eyes, I don't know what will.

The problem with these experimental shots, was this mRNA technology has never been tried before in humans. Evidence is showing it is not effective and it is the most dangerous vaccine or drug in history. Death rates are rising instead of falling. The shots are also very narrowly focused on one entente of the virus or spike protein and **it was developed for the original Wuhan strain that is long gone.**

I have been wondering what the central planners would do if this mRNA experiment failed and now we know. The script will unfold like this. **They will raise extreme fear** on Omicron which has already started. **Cases of this new variant will soar**, even if they actually don't, they will report that they are. We know how they can fudge and twist case and hospital data. Did you know that hospitals get additional funding if they code deaths as Covid, use Covid approved treatments and protocols. In Canada, health officials have a large pay increase during a pandemic, lets keep it going. They are **planting seeds that current doses might not be effective** on Omicron. **The cases, hospitalization and deaths will soar among the vaccinated and Omicron will be blamed. This will be used to cover up the vaccine failure.** Big Pharma says it will take 100 days or 3 to 4 months to get new vaccines. They will push that **the best protection for now is the booster shot and they might increase the booster dosage.** After that they will come out with their **new shots and you will have to get 1 or 2 of these.** Governments will mandate restrictions and lock downs. **We will be back to where we started in spring 2020.**

[Canada has already announced new lock down support programs.](#)

I don't know how many will get fooled and sucked in by this new scheme. This is the path or choice:

- You have 2 shots that are no good or little at best;
- You will now need a booster;
- Next, a 4<sup>th</sup> shot of a new mRNA for Omicron;
- Probably a 5<sup>th</sup> in a two dose regime;
- Some where along this path, your Vaxx passport will be no good and you need an updated one;
- Children are getting the old useless shots, so they will push the new Omicron one on them.

**You can always say no!** Even take a wait and see approach. However, always look at actual data, not news reports. The unvaccinated have a huge advantage. **They can always change their mind and take the shots**, like even skip the failed first 3 and try the new ones. I doubt these will work either and most likely by then the truth will get out. However, if you have or do take the shots, you are already down the rabbit hole and the top is filled in. You cannot get unvaxed once vaxed.

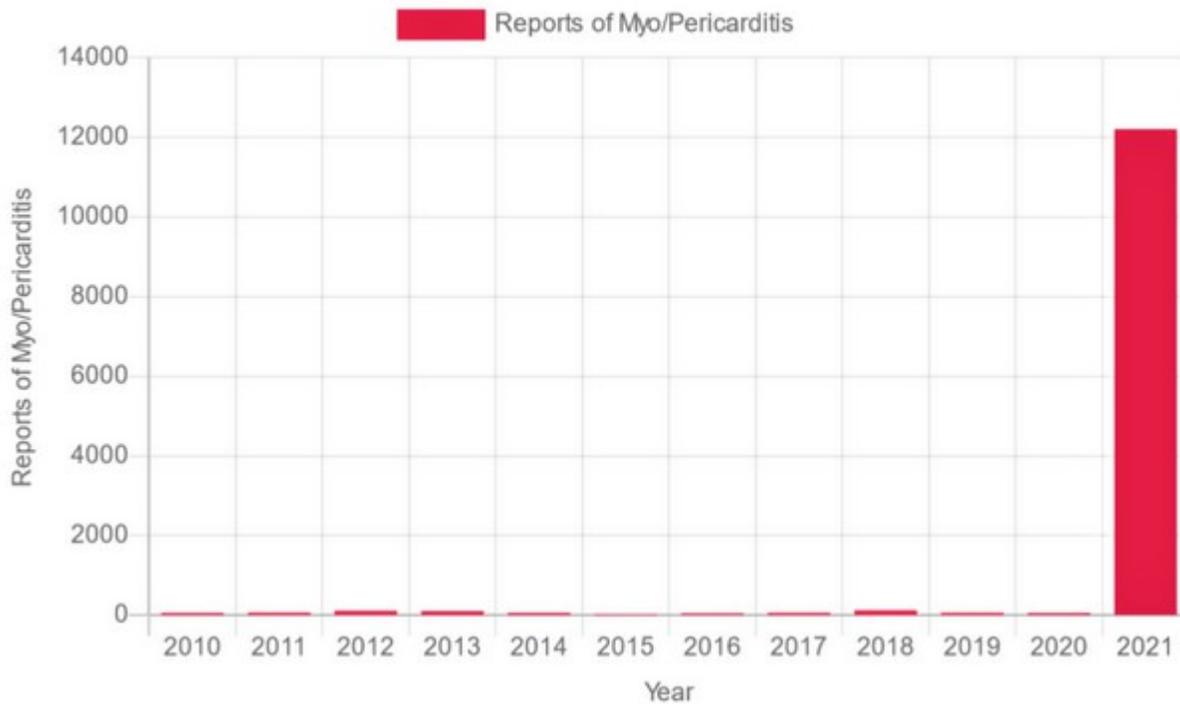

I am very sad to say and don't take it likely. As I have been predicting, this winter flu season will be a complete disaster and a collapse in many health care systems, especially Canada, mostly Ontario. It will be the perfect storm, new Covid and Influenza cases, higher rate of vaccine injuries and deaths and add in hospitalization and death because of delayed treatments in other disease. I hope and pray for everyone, but I am afraid it is going to be a very sad winter.

What can you do? Take vitamins, eat healthy and avoid crowds, stores etc. Most grocery stores you can order online, wait in the parking lot and they will deliver to your vehicle. Same with other stores that don't get locked down. Open your windows in the winter to get fresh air in the home, so what if it is a little more cost for heat. **Let us hope this Omicron variant is as mild as first cases indicate** and this whole plandemic is even more hot air than what we have up to now.

The biggest risk with these experimental mRNA shots is Myocarditis, and more so in younger people. The big Pharma crooks even admit this but they down play it as a very rare risk. The data proves other wise. Because of this risk, the UK Joint Committee on Vaccination advised not to vaccinate children, but the UK Health ministry over ruled and did it any way for 12 years and up back in early September. Now there is a 57% increase among female children deaths compared to the 5 year average since the roll out in the UK.

[This next chart is from VAERS](#) and is all age groups, but very alarming. The link also shows by age and how this myocarditis is far worse in younger people.

All Myo/Pericarditis Reported to VAERS by Year (all vaccines)

The scary thing about Myocarditis is that the damage it causes to the heart is not reversible, the heart cannot heal from this. As scary as this chart is, the big part of the vaccine roll outs did not happen until summer and there is about 6 weeks to go in 2021 since the data cut off in the above chart. With boosters and 4<sup>th</sup> and 5<sup>th</sup> shots coming, these numbers will explode even from the high 2021 number.

My personal experience is I only know 2 people who have got Covid-19 since the whole thing started, one a friend my son brought fishing, I just met him once (that time), and a kid, young adult now that I coached in hockey, both had fairly mild cases. I know 3 people who had/have Myocarditis since the shot roll outs. And 2 of those way more severe than the Covid cases. My daughter is in Peel region, the most heavily affected area in Canada, but just knows one person who got Covid, about 2 weeks ago. Where is it? And I hope I don't see it either.

I often commented how my region has not been hard hit at all. Well guess what, we are the hot spot in Canada now. Cases here are about double the highs in the last cycle. It is mostly unvaccinated but because there is a large jump in children. The 5 to 11 age group, just 6 different ages has 21 cases of the new 109, while the 18 to 29 age group also has 21 but that is 11 different ages. Age 29 and younger are 50 of the 109 new cases. This is obvious a reflection of back to school since September. There are universities here too.

**Some good news, another newsletter, much bigger than mine is starting to expose the Covid truth.** Gregory Mannarino has 194,000 subscribers to his You Tube newsletter. On the weekend he did an interview with a doctor who told the truth. Nothing we don't already know but Mannarino was blown away. Then You Tube pulled his interview. You can see his reaction here, unless they pull this by the time you get there.

[IF YOU DO NOT COMPLY THEY WILL TAKE EVERYTHING FROM YOU](#) "People have been made zombies and sheep". "We are in a hyper bubble." "Why are you not allowed to tell the truth." I have watched Gregory many times and he really knows his stuff. He is also a very good speaker/presenter.

He is on my page that we ain't seen nothing yet!!!!!!

I had some discussions about the issue of people being roped into all this BS and it really boils down to most people, 95% not willing, don't care, too lazy or whatever to actually check facts and data on media stories. Especially if the story re-enforces their believe, their hope and their decisions. I came up with a good analogy.

100 people are in a room and are asked to check the weather. They all pull out their mobile device to their weather app and it says "mostly cloudy and no rain". However, 5 people get up and open the drapes on the window and it is pouring rain. Now somebody new comes into the room and asks what the weather is today. 95 responses say cloudy, no rain. Do you think that guy is going to believe the 5 crazy outcasts that say it is pouring rain??

### Anyway, what about the markets!

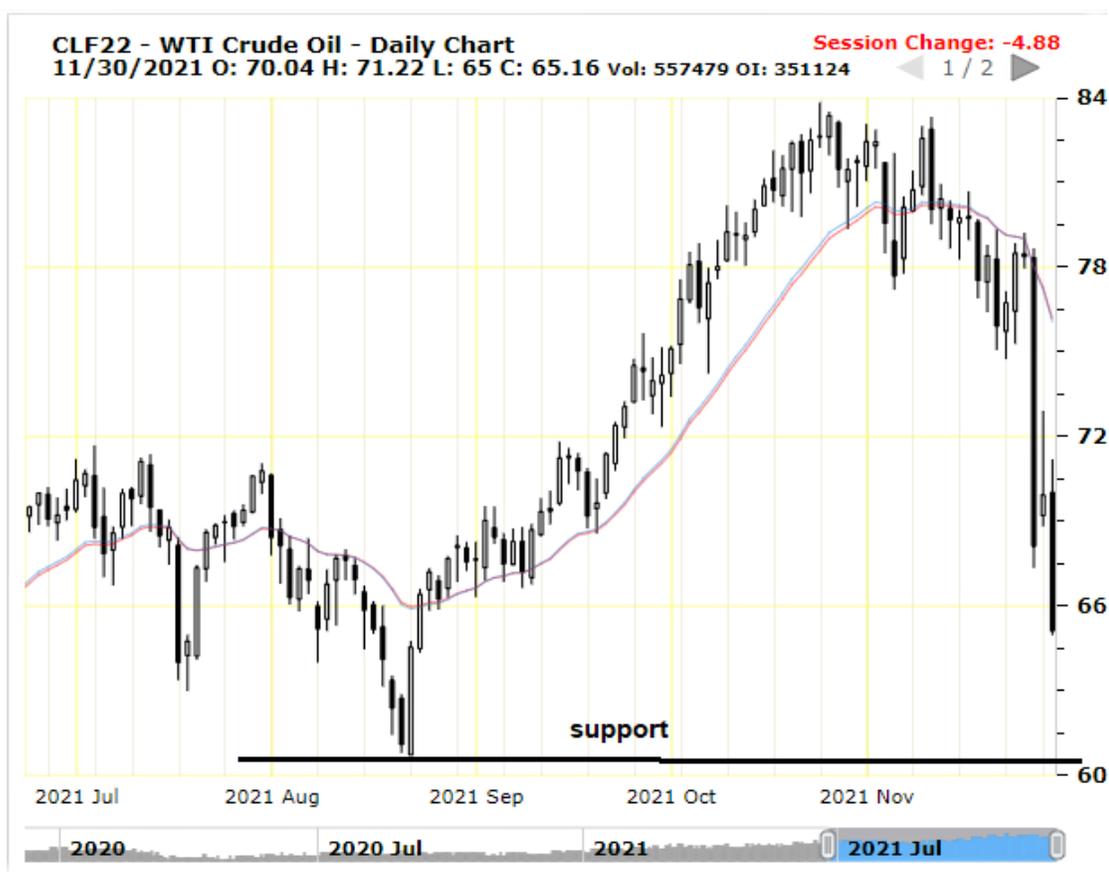

A panic Friday, a bit of a bounce back Monday and down again today. It is crazy times and hard to predict markets that have simply become big casinos, not much makes sense. We are in the biggest bubble in history and it could easily go higher or pop.

**I believe the best strategy is to have a decent cash level, so you don't have to sell during a panic. Stay in the stock market with a basket of dividend stocks and our speculative bets. Hedge with physical gold and silver along with some gold stocks.**

Thus far, the market pull back has been small. It is 1PM and the markets were not down much until about 11 AM, now the S&P 500 has hit new lows in this correction. I expect we will at least test the support area. I think markets will not fall real quick until more information and or news surfaces with the Omicron variant. What are the risks to economic slow down? **I think it will be real bad, but that will probably not surface until at least January some time.**

The oil price is signalling a slower economy and perhaps less demand if air travel gets grounded. Resistance was around \$60 so that now becomes support and is likely where the price is headed short term.

Gold is down a bit more today, probably going to test that \$1750 area I mentioned in my November 23<sup>rd</sup> update. It is going to be very interesting if this next Covid wave weakens economic demand enough to lower prices or the same wave hits supply chains as hard as economic demand. Will we see more stimulus and money printing? Probably just a matter of time.

**TAAT Global**  
**Entry Price - \$4.25**

**TSXV:TAAT**

**Recent Price \$3.60**  
**Opinion - hold**

TAAT is bucking the trend and on the weekend announced their potentially largest distribution deal to date. TAAT has become an official supplier of H.T. Hackney Company, which is one of the largest United States wholesale distributors, with revenues of \$3.9-billion (U.S.) and a network of more than 20,000 retail locations in 22 states. On Monday, Nov. 22, 2021, H.T. Hackney issued a purchase order for 168 TAAT countertop displays and over 1,000 cartons of TAAT for the initial chain-wide placement of the product at Par Mar Stores, which operates numerous points of sale in Ohio, West Virginia and Pennsylvania, including convenience stores in gas stations under national banners, such as Amoco, British Petroleum, Shell and Sunoco.

Today, TAAT a sponsor of "To The Moon", an invitation-only networking event and immersive art exhibit being held on Tuesday, November 30, 2021 in Miami, hosted by WallStreetBets ("WSB"). In January 2021, WSB rose to prominence as an online investor community after it was discovered to have been instrumental to a number of remarkable developments in the capital market.

Maybe this has helped move the stock last 2 days? Anyway in this market probably best to just hold for now.

The stock has made a good bounce off a triple bottom

Not much else new with our Selection List stocks so far this week.
